Problem Statement

Problem Statement

Physicians encounter patient data inputted in languages different from their own during medical trips. Unreliable internet access makes it hard to use online translation tools like Google Translate.

No Internet

Try:

- Checking the network cables, modem and router
- Reconnecting to Wi-Fi

ERR_INTERNET_DISCONNECTED

Project Vision

As fEMR is a global project focused on providing continuity to medical relief efforts in low resource settings, it is important the application supports languages from all over the world. The internationalization team has worked to support 44 different languages for both static and dynamic translations in low resource environments

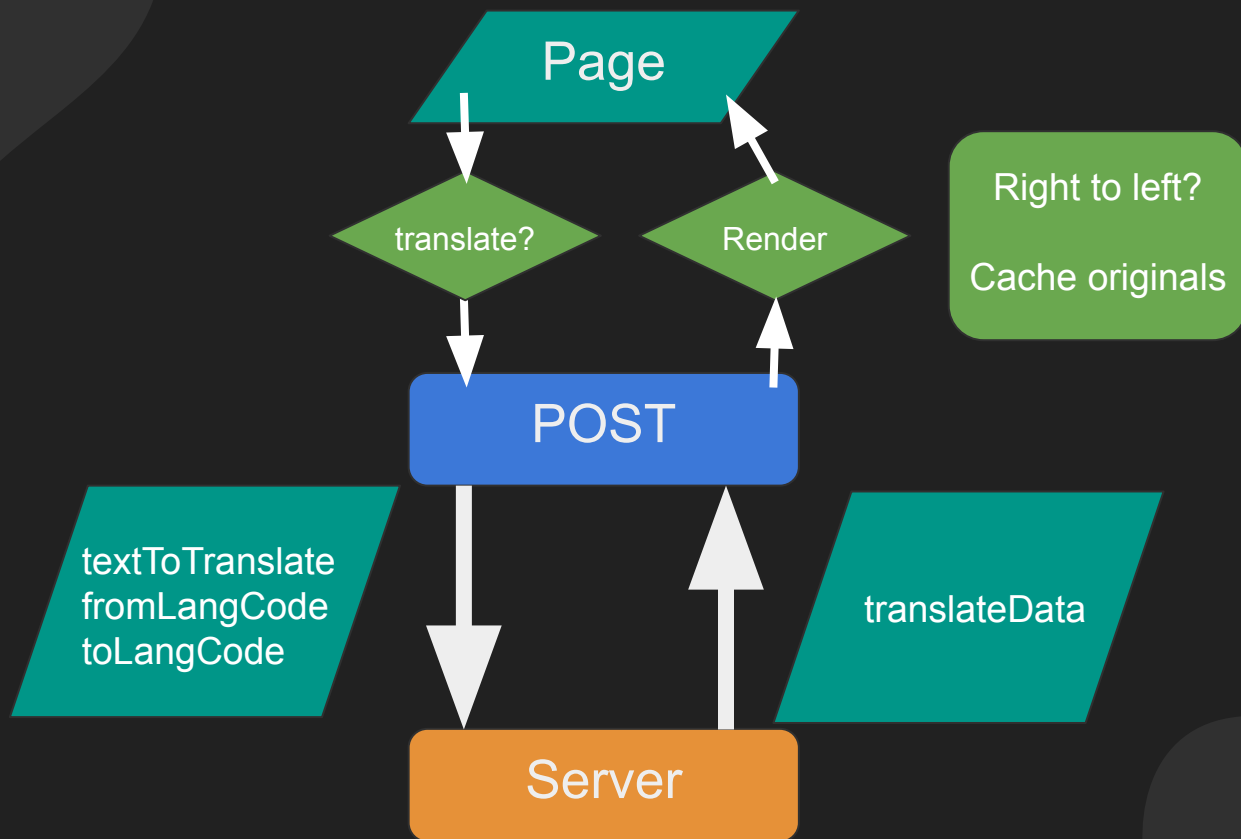

Stakeholders

Team fEMR is a nonprofit organization dedicated to providing continuity of care between short-term medical relief efforts in low resource settings all around the world.

- Physicians
- ICD-10 coders
- Patients

Project Architecture

Offline Translation Libraries

Argos

Fast

Small model size (~90MB)

English -> X Language

X Language -> English

88 Models (44 Languages)

MARIANMT

MarianMT

Slower on average

Larger model size (~300MB)

Many more language pairs

English in the Middle not needed

1440 models

Offline Translation Library Decision

SHIP WITH ARGOS

- Ship with all Argos models
- 44 languages initially supported
- Supported through “English in the Middle” translations

ADMIN PAGE

- Admin page to support downloading and updating of new models
- Automatically schedules downloads when a user selects a new language
- After download, language is “fully optimized” through the use of both Argos and Marian models

Argos Supported Languages (On Ship)

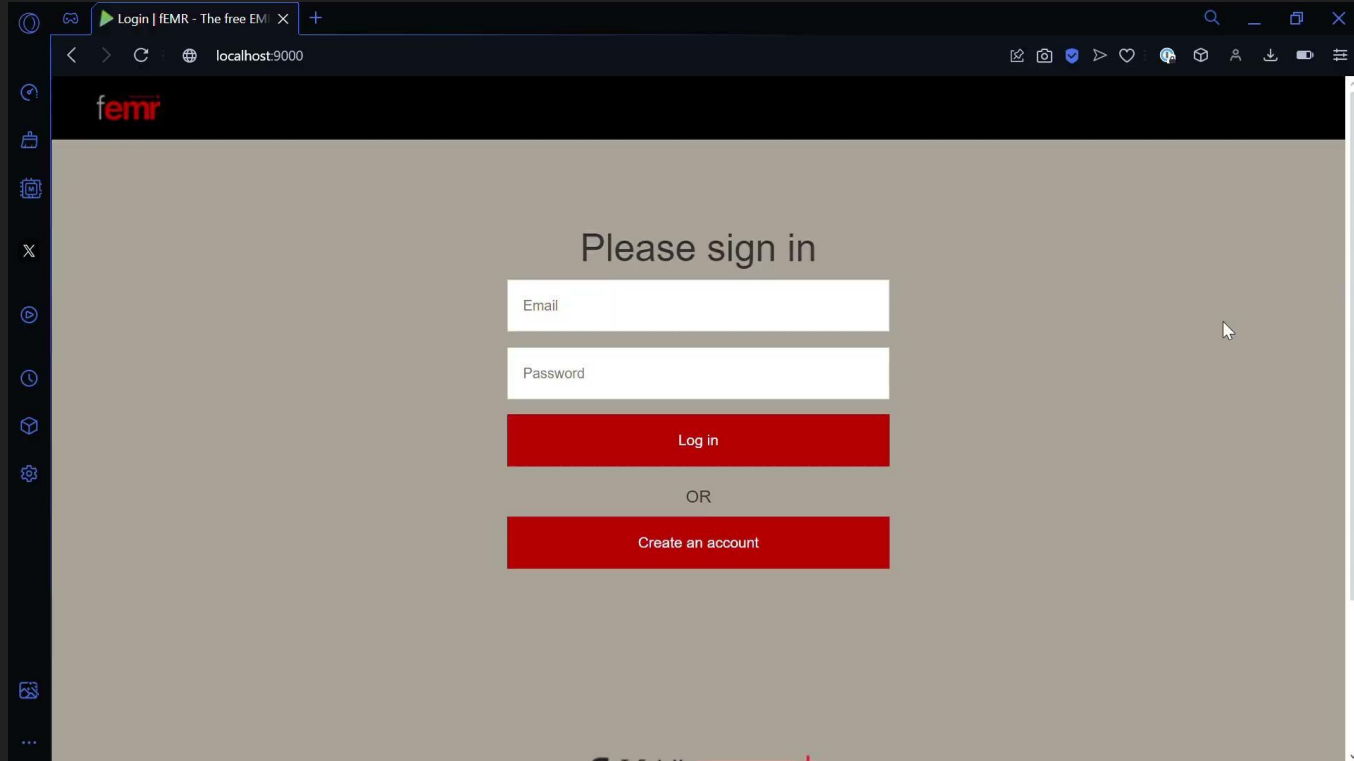

- Arabic
- German
- Spanish
- Finnish
- Irish
- Hindi
- Hungarian
- Indonesian
- Italian
- Japanese
- Korean
- Portuguese
- Swedish
- Ukrainian
- Azerbaijani
- Bulgarian
- Bengali
- Catalan
- Czech
- Danish
- Greek
- Esperanto
- Estonian
- Persian
- French
- Hebrew
- Lithuanian
- Latvian
- Malay
- Norwegian
- Dutch
- Polish
- Romanian
- Russian
- Slovak
- Slovenian
- Albanian
- Thai
- Tagalog
- Turkish
- Chinese
- Chinese (traditional)
- Urdu

						TEMR-92	In Arabic encoding the URL errors 414 becomes too long too easily	=	
						TEMR-91	French character à (%C3%A0) breaks URL encoding	=	

35 temr-dev Bugs Reported

Test Quality

- Two test suites and testing libraries :
 - JUnit 4 for Java Tests
 - Pytest for Python tests
- Tests for Java Translation Functions
- Tests for Python HTTP Server and how it handles Argos, Marian, English in the Middle, and invalid translations

Test Results

✓ TranslationResponseMapTest (unit.app.femr 5 sec 349 ms)

- ✓ testRtlLanguages 5 sec 345 ms
- ✓ testSameLanguage_noTranslation 1 ms
- ✓ testDifferentLanguages_translationOccurs 3 ms

✓ TranslationServiceTest (unit.app.femr.bus 16 sec 157 ms)

- ✓ serverNotRunningTrue 4 sec 334 ms
- ✓ getPortFromLogEmptyFileTest 2 ms
- ✓ getPortFromLogNoFileTest 1 ms
- ✓ makeServerRequestTest 11 sec 639 ms
- ✓ serverNotRunningFalse 3 ms
- ✓ getPortFromLogTest 2 ms
- ✓ parseJsonResponseTest 176 ms

Future Stories and Additions

Future

- As a physician who speaks a language not in the list of ones currently supported by fEMR, I'd like to request that my language be supported
- As an admin, I'd like package downloads to be automatic and not require my input
- Docker deployment!

Reflection on Project Work

Reflections: What Went Well

- Good team makeup
- Working with a large legacy codebase
- Good roadmap planning in early quarters/sprints
- Merging branches with feminators
- Client meetings
- Personal Growth:
 - Clean Agile, WELC, Individual Presentations

Reflection: What Didn't Go Well

- Last quarter task logging & sprint work distribution
- Scheduling meetings with feminators team
- Merged branches introduced opportunities for bugs
- Quality testing was hard on a large codebase

Handoff To Client

Handoff

- GitHub Project Management
- Documentation
 - TechSpec
 - Gitbook

Real data - Real people

femr is a fast EMR solution for remote clinics who depend on speed and ease of use rather than complex features. We are committed to providing adequate continuity of care for people in need of medical attention in low-resource locations.

Dynamic Translation

The features implemented are focused on allowing for the offline translation of medical provider notes, diagnoses, and measurements for the purpose of working around language barriers between medical providers during relief efforts.
